SUMMARY

Motivated BCA student with a strong foundation in software development, networking, and information technology. Experienced in developing web applications, working with databases, computer networks, and AI-based projects. A quick learner with strong problem-solving and analytical skills, eager to apply technical knowledge, gain practical experience, and contribute effectively in a professional IT environment.

EXPERIENCE

Nepal Electricity Authority (NEA) - Network Intern | May 2026 - Aug 2026

- Supported enterprise IT operations in the Network & Security Unit using Active Directory, LDAP, DHCP, OSPF, IPsec VPN, and FortiGate.
- Diagnosed and resolved real-world network connectivity, domain access, and VPN issues through cross-team collaboration.
- Managed routine system monitoring, preventive maintenance, and technical documentation to ensure network reliability.

PROJECTS

■ Bird Species Identification System

Developed a deep learning-based application that classifies bird species from uploaded images using Convolutional Neural Networks (CNN) and TensorFlow. Implemented data preprocessing, augmentation, and model training techniques to improve prediction accuracy and built a simple interface for users.

■ Weather App

Developed a beginner-friendly Android application that integrates location services and fetches real-time weather data from a reliable API. Designed a clean and user-friendly interface to display accurate weather updates, ensuring an engaging user experience.

■ Hackathon Organizer – DAV Codefest 2025

Organized a 72-hour hackathon with 150+ participants. Led a 5-member team through close collaboration with sponsors, faculty, and advisory members to manage tasks, timelines, and logistics. Oversaw registration and ensured seamless real-time event execution.

■ Fishtopia

An e-commerce website built with React.js (JavaScript), Python (Flask), and OOP principles. Features a mobile-responsive design, cart functionality, secure payment processing via Khalti API integration, and an admin panel for management.

■ Adopt a Buddy

An adoption platform for dogs and cats built with PHP and MySQL for backend management and HTML & CSS for the frontend. Developed using the Waterfall methodology, featuring a user-friendly interface, secure checkout, and management of products, orders, and users.

EDUCATION

Bachelors in Computer Application

DAV COLLEGE

2022 - Present

+2 (Biology)

CAPITAL SECONDARY SCHOOL(CCRC)

2018 - 2021

CERTIFICATIONS

- Front-end with React + UI/UX
- Graphics Design
- IOT & Robotics
- Data Science and AI Workshop
- Residential Workshop on Gen AI

SKILLS

- **Development:**
React.js, Python, Flask, PHP, HTML/CSS, REST APIs
- **Databases:**
MySQL, SQL
- **Networking & IT:**
TCP/IP, VLAN, Routing & Switching, Active Directory, LDAP, FortiGate
- **Tools:**
Git, GitHub, Android Studio, Trello, Postman
- **Soft Skills:**
Problem Solving, Communication, Time Management, Adaptability
